## React moment format date time

By default, Windows formats data with slashes (3/23/16). However, if you want to use a different format for the date, it would be to use points instead of slashes (3.23.16), it's easy to change in Windows settings. You can also change the time format. RELATED: Use date periods in Excel Date and time format affects the clock on the taskbar, as shown above. It also affects the programs you run in Windows, would be Excel, unless you overwrite the format in the program itself. For example, you might want to use slashes on the date displayed on the taskbar, but use periods in the data you enter in Excel. We'll show you to select a different format and create a custom date and time format in Windows 10, 8.1, and 7. Accessing the basic options for changing the date and time format is slightly different in each version of Windows, so we will discuss these procedures separately in the first three sections below. However, entering a custom date and time format is done in the same way in all three Windows versions. So follow the steps in one of the first three sections, depending on which version of Windows you're using, and then continue with the last section. As an example in this article, we'll show you to change the date format, but changing the time format is a similar process and we'll mention where you can do it as well. Access date and time format settings in Windows 10 If you're using Windows 10, click the Box or Search button on the taskbar. If you don't see the box or the Search button, you can easily activate one or the other. Type change the date in the Search box. Results start to show as you type. Click Change Date and Time Format in the list of results. On this screen changing date and time format settings, you can select different formats for Short Date, Long Date, Short Time, and Long Time. You may not see the format you want in the list of options for the date or time. For example, there are different formats that use slashes and a torque that uses broken lines, but there is no data that uses dots. You must access a screen in the old Control Panel to enter a custom date or time format. To access the Control Panel screen that will allow you to enter a custom date or time format, click the rear arrow button in the upper-left corner of the Settings screen. You are returned to the Data & Time screen in the Time & Language settings. Scroll down to the right of the Date and Time screen and click the Additional Date, Time, and Regional Settings link under Related Settings. The Clock, Language, and Region screen on the control panel is displayed. In Region on the right, click the Change Date, Time, or Number Formats link. This opens the Region dialog box. See the last section of this post for information about creating a custom date or time format from this menu. Note that there are other ways to access Control Panel in Windows 10, to Date and time format settings in Windows 8.1 If you're using Windows 8.1, the procedure for changing the date and time format is slightly different. To get started, make sure the Start screen is active. If you're doing it on the desktop, click the Start button in the lower-left corner of the screen. On the Start screen, start typing change date (without quotation marks). The Search pane opens and the results start to show. When you see Change Date and Time Format appear in the list with the settings icon, click it. This screen allows you to select different formats for short and long and short and long time. However, as with Windows 10, you are limited in the available options. If you want to use periods in dates, you'll need to enter a custom date format. We'll show you to go to the Control Panel screen you need to do this. To access Control Panel, we need to go back to a few screens. So click the back arrow button in the upper-left corner of the change date and you screen formats, . . . and again on the Time and Language screen. At the bottom of the left pane on the PC Settings screen, click the Control Panel link. Note that there are several different ways you can access Control Panel in Windows 8/8.1. In Control Panel, click the Change Date, Time, or Number Formats link under Clock, Language, and Region. This opens the Region dialog box, which you will use in the last section of this article to customize the date and time format. Go to date and time format settings in Windows 7 To access date and time format settings in Windows 7, click the Start menu button and enter the date change (without quotation marks) in the Search box. Then, click the Change Date, Time, or Number Format link in the list of results. This opens the Region dialog box that we are discussing in the next section. Unlike Windows 10 and 8.1, the Region dialog box is the only place where you can select predefined date and time formats. customize the date and time format in Windows 10, 8.1, and 7 Now we'll set up a custom date using periods. If you are using Windows 10 or 8.1, the Region dialog box should be open and the Formats tab should be active. If not, click the Formats tab to turn it on. Then, click Additional Settings at the bottom of the tab. This dialog box also allows you to select predefined date and time formats, just like the Change Date and Time screen formed from PC Settings in Windows 10 and 8.1. In the Customize Format dialog box, click the Date tab. In the Date Formats section, the Short Date drop-down list box is also an edit box, allowing you to enter a different format. So the format you want to use in the Short Date box. In our example, we entered M.d.yy. A small caption is displayed under the Short Date and Long Date drop-down lists, indicating what the letters used in the date format mean. DD for the day adds a zero driving before monday with a single digit. You can also use MM to add add zero before the single-digit months, even if that notation is not listed. For the year, yyyy uses the entire year, with four digits, and yy uses the last two digits of the year. For example, MM.dd.yyyy will be displayed as 03.09.2016. After you've entered the custom format in the Short Date box, click Apply. NOTE: The short date is the one used to display the date in the notification area of the taskbar. Therefore, if you want to display a custom long date on the taskbar, enter the long date that you want to use in the Short Date box, even if it is available in the Long Date drop-down list. The custom date format you entered is displayed in the Short Date box in the Example section. You can also enter a custom time format by clicking the Time tab. After you have set up the custom date and time, click OK in the Customize Format dialog box. Click OK to close the Region dialog box. If the Control Panel and Settings windows are still open, click the X button in the upper-right corner of each window to close them. Our custom date format with periods is now displayed in the notification area of the taskbar. Note that when you change the date or time format back to a different format, the custom format is not preserved as a choice. You'll need to re-enter it to change to this custom format. Thinkstock If the OkCupid account hasn't seen much of the action lately, get ready to have your inbox flooded with new possibilities: 8:57 p.m. on January 5th is the busiest time of year for online dating, according to Match.com. MORE: 5 Women Who Found Love Online This content is created and maintained by a third party, and imported on this page to help users provide their email addresses. You might be able to find more information about this and similar content at piano.io There are times when all you want to do is make some popcorn, curl up on the couch with your partner and enjoy a good date movie together. But with so many options available right at your fingertips, it can be especially hard to determine what you should be watching with someone special. Well, we're here to help! These are our all-time favorite movies: Buena Vista/Getty Images Sometimes romance can develop in the strangest of circumstances, and this movie exemplifies the real importance of having not only love in your life, but having family as well. 20th Century Fox / Getty Pictures you will Forget the captivating and tragic love story between Jack and Rose or goodbye to their tear-jerking one another. This award-winning film is bound to capture your attention as well as your heart. This iconic film sends an extremely powerful message about the intrinsic link between love and forgiveness. It also reminds you about the precious and fleeting nature of love, as well as of life. Speaking of iconic hits, this classic film explores the very complicated connection between friendship and courtship. Complete with interviews from older couples in happy and long-term relationships, this film reveals how love can truly grow, develop and flourish over time. It has been said that hindsight is 20/20, and this video demonstrates how looking more closely at a past relationship under a brand new lens can help you see exactly where things went right, as well as wrong. Dave Hogan/Getty Pictures If you want to watch something that is guaranteed to put a smile on your face as well as your partner, you will find a lot of laughs and love in this feel-good movie. And if you're a couple who has an affinity for binge-watching, the best part is that this movie is the first in a trilogy. Sometimes confronting your past is the only way to unlock a better and brighter future. And this film exemplifies how, even in the most difficult moments of life, you can find love and find yourself. In this iconic film, a short-term business arrangement between Edward and Vivian turns into a long-lasting love. Full of memorable lines and classic scenes, this love story reminds you of the differences between you and your partner can make you a stronger pair. Hulton Archive/Getty Images If you are looking for romance as well as unforgettable dance moves, this iconic film takes center stage. Not only will you be rooting for Baby and Johnny, but their purest romance will have you and your partner smiling from ear to ear. Sunset Boulevard /Getty Images Speaking of classics, this film demonstrates the eternal nature of love and how it stays long after someone has left. When someone steals your heart from an early age, you won't stop at nothing to show this person what it means to you. And even if you have a lot of competition, you'll still find a way to capture the attention of your true love. In this very popular film, the love between Allie and Noah really lasts a lifetime. And even though they come from completely different worlds, all that matters is that they mean the world to each other. Do you believe in destiny? This video shows you finding that the perfect person is nothing but chance. In a word, it's really serendipity. This hilarious film explores many ways in which the right person can be right in front of you, even you don't see him at first. In fact, this movie will hint you into (so to speak) about to recognize your true feelings for someone else. Andreas Rentz/Getty Pictures Can Two People Just Hook Up Without Ever Develop Romantic, Romantic for each other? This film explores many ups and downs to enter into a relationship of friends with benefits. Many different stories and lives overlap in this film which beautifully illustrates all the different and complex stages of romance, dating, marriage, but also love. There are times when it takes the power of love to break through a rough exterior, and you might end up surprising yourself by falling for a person you didn't know was there. Lars Niki/Getty Images You and your partner will definitely be laughing at this comedy of errors when one date night doesn't go exactly according to plan. Sometimes you have to strive to find your true love. However, it is important to remember that fairy tales become reality. True.
